## Protein Information

---

<b>Name</b>	USP17L24
-------------	----------

<b>Function</b>	Deubiquitinating enzyme that removes conjugated ubiquitin from specific proteins to regulate different cellular processes that may include cell proliferation, progression through the cell cycle, apoptosis, cell migration, and the cellular response to viral infection.
<b>Cellular Location</b>	Nucleus, nucleolus. Endoplasmic reticulum
<b>Tissue Location</b>	Expressed in heart, brain, liver and skeletal muscle.

## Background

UBP17 recognizes and hydrolyzes the peptide bond at the C-terminal Gly of ubiquitin. Involved in the processing of poly-ubiquitin precursors as well as that of ubiquitinated proteins (By similarity).

## Images

Immunohistochemical analysis of paraffin-embedded Human brain tissue using AP5491b performed on the Leica® BOND RXm. Tissue was fixed with formaldehyde at room temperature, antigen retrieval was by heat mediation with a EDTA buffer (pH9. 0). Samples were incubated with primary antibody(1:500) for 1 hours at room temperature. A undiluted biotinylated CRF Anti-Polyvalent HRP Polymer antibody was used as the secondary antibody.

Immunofluorescent analysis of 4% paraformaldehyde-fixed, 0. 1% Triton X-100 permeabilized U-251 MG cells labeling USP17L24 with AP5491b at 1/25 dilution, followed by Dylight® 488-conjugated goat anti-Rabbit IgG secondary antibody at 1/200 dilution (green). Immunofluorescence image showing Nucleus staining on U-251 MG cell line. Cytoplasmic actin is detected with Dylight® 554 Phalloidin(red). The nuclear counter stain is DAPI (blue).

Western blot analysis of lysate from MAD-MB-231 cell line, using USP17 Antibody (C-term)(Cat. #AP5491b). AP5491b was diluted at 1:1000. A goat anti-rabbit IgG H&L(HRP) at 1:10000 dilution was used as the secondary antibody. Lysate at 20ug.

UBP17 Antibody (C-term) (Cat.#AP5491b) western blot analysis in HepG2 cell line lysates (35ug/lane).This demonstrates the UBP17 antibody detected the UBP17

protein (arrow).

UBP17 Antibody (C-term) (Cat. #AP5491b) flow cytometric analysis of HepG2 cells (right histogram) compared to a negative control cell (left histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.
