Protein Information

Name IFIT3

Synonyms CIG-49, IFI60, IFIT4, ISG60

Function IFN-induced antiviral protein which acts as an inhibitor of cellular as well as

viral processes, cell migration, proliferation, signaling, and viral replication. Enhances MAVS-mediated host antiviral responses by serving as an adapter

bridging TBK1 to MAVS which leads to the activation of TBK1 and

phosphorylation of IRF3 and phosphorylated IRF3 translocates into nucleus to promote antiviral gene transcription. Exhibits an antiproliferative activity via

the up-regulation of cell cycle negative regulators CDKN1A/p21 and

CDKN1B/p27. Normally, CDKN1B/p27 turnover is regulated by COPS5, which binds CDKN1B/p27 in the nucleus and exports it to the cytoplasm for

ubiquitin-dependent degradation. IFIT3 sequesters COPS5 in the cytoplasm, thereby increasing nuclear CDKN1B/p27 protein levels. Up-regulates

CDKN1A/p21 by down-regulating MYC, a repressor of CDKN1A/p21. Can negatively regulate the apoptotic effects of IFIT2.
