

# ABCB5 Antibody (N-term)

Purified Rabbit Polyclonal Antibody (Pab)

Catalog # AP6122a

## Product Information

---

Application	WB, FC, E
Primary Accession	<a href="#">Q2M3G0</a>
Reactivity	Human, Mouse
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit IgG
Calculated MW	138641
Antigen Region	1-30

## Additional Information

---

Gene ID	340273
Other Names	ATP-binding cassette sub-family B member 5, ABCB5 P-gp, P-glycoprotein ABCB5, ABCB5
Target/Specificity	This ABCB5 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 1-30 amino acids from the N-terminal region of human ABCB5.
Dilution	WB~~1:1000 FC~~1:25 E~~Use at an assay dependent concentration.
Format	Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.
Storage	Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
Precautions	ABCB5 Antibody (N-term) is for research use only and not for use in diagnostic or therapeutic procedures.

## Protein Information

---

Name	ABCB5 ( <a href="#">HGNC:46</a> )
Function	Energy-dependent efflux transporter responsible for decreased drug accumulation in multidrug-resistant cells (PubMed: <a href="#">12960149</a> , PubMed: <a href="#">15205344</a> , PubMed: <a href="#">15899824</a> , PubMed: <a href="#">22306008</a> ). Specifically present in limbal stem cells, where it plays a key role in corneal development and repair (By similarity).

## Cellular Location

Cell membrane; Multi-pass membrane protein  
{ECO:0000255|PROSITE-ProRule:PRU00441,  
ECO:0000269|PubMed:12960149}

## Tissue Location

Expressed by CD133-expressing progenitor cells among epidermal melanocytes (at protein level). Widely expressed with specific expression in pigment cells. Highly expressed in several malignant tissues: highly expressed in clinical melanomas, with low expression in normal skin. In melanoma, marks malignant melanoma- initiating cells (MMIC), in which clinical virulence resides as a consequence of unlimited self-renewal capacity, resulting in inexorable tumor progression and metastasis. Also highly expressed in a number of leukemia cells. Expressed in basal limbal epithelium

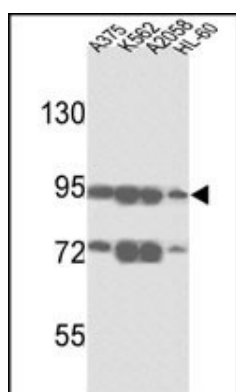

## Background

ABCB5 belongs to the ATP-binding cassette (ABC) transporter superfamily of integral membrane proteins. These proteins participate in ATP-dependent transmembrane transport of structurally diverse molecules ranging from small ions, sugars, and peptides to more complex organic molecules.
