

Elf-4 Polyclonal Antibody

Catalog # AP69707

Product Information

Application WB Primary Accession Q99607

Reactivity Human, Mouse

HostRabbitClonalityPolyclonalCalculated MW70730

Additional Information

Gene ID 2000

Other Names ELF4; ELFR; MEF; ETS-related transcription factor Elf-4; E74-like factor 4;

Myeloid Elf-1-like factor

Dilution WB~~Western Blot: 1/500 - 1/2000. ELISA: 1/10000. Not yet tested in other

applications.

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

Protein Information

Name ELF4 {ECO:0000312 | EMBL:CAI42882.1}

Function Transcriptional activator that binds to DNA sequences containing the

consensus 5'-WGGA-3'. Transactivates promoters of the hematopoietic growth

factor genes CSF2, IL3, IL8, and of the bovine lysozyme gene. Acts

synergistically with RUNX1 to transactivate the IL3 promoter (By similarity). Transactivates the PRF1 promoter in natural killer (NK) cells and CD8+ T cells (PubMed:34326534). Plays a role in the development and function of NK and NK T-cells and in innate immunity. Controls the proliferation and homing of CD8+ T-cells via the Kruppel-like factors KLF4 and KLF2 (By similarity). Controls cell senescence in a p53-dependent manner. Can also promote cellular transformation through inhibition of the p16 pathway. Is a transcriptional regulator of inflammation, controlling T-helper 17 (Th17) cells and

macrophage inflammatory responses. Required for sustained transcription of

anti-inflammatory genes, including IL1RN (PubMed:34326534,

PubMed:<u>35266071</u>). Is a negative regulator of pro- inflammatory cytokines expression including IL17A, IL1B, IL6, TNFA and CXCL1 (PubMed:<u>34326534</u>, PubMed:<u>35266071</u>). Down-regulates expression of TREM1, a cell surface receptor involved in the amplification of inflammatory responses (By

similarity) (PubMed:34326534, PubMed:35266071).

Cellular Location Nucleus, PML body. Note=Accumulation into PML nuclear bodies is mediated

by PML

Tissue Location Abundantly expressed in the placenta and in a variety of myeloid leukemia

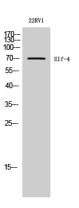

> cell lines. Moderate levels of expression in heart, lung, spleen, thymus, peripheral blood lymphocytes, ovary and colon. Lower levels of expression in

Jurkat T-cells and other T-cell lines and no expression in brain.

Background

Transcriptional activator that binds to DNA sequences containing the consensus 5'-WGGA-3'. Transactivates promoters of the hematopoietic growth factor genes CSF2, IL3, IL8, and of the bovine lysozyme gene. Acts synergistically with RUNX1 to transactivate the IL3 promoter (By similarity). Also transactivates the PRF1 promoter in natural killer (NK) cells. Plays a role in the development and function of NK and NK T-cells and in innate immunity. Controls the proliferation and homing of CD8+ T-cells via the Kruppel-like factors KLF4 and KLF2 (By similarity). Controls cell senescence in a p53-dependent manner. Can also promote cellular transformation through inhibition of the p16 pathway.
