## Protein Information

---

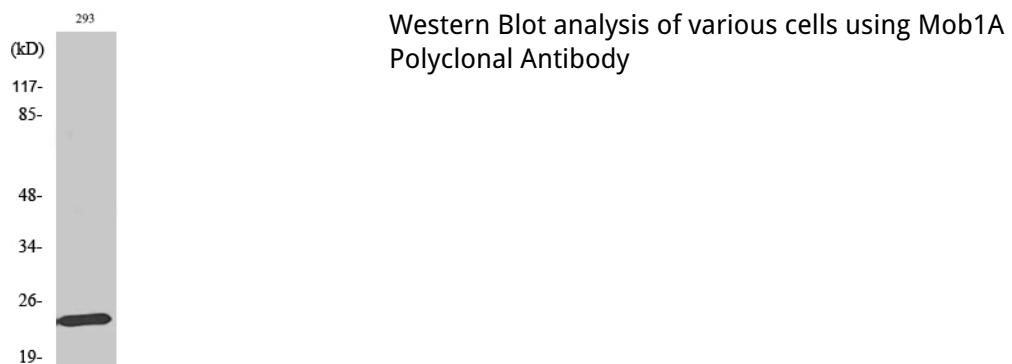

<b>Name</b>	MOB1B ( <a href="#">HGNC:29801</a> )
<b>Synonyms</b>	MOB4A, MOBKL1A
<b>Function</b>	Activator of LATS1/2 in the Hippo signaling pathway which plays a pivotal role in organ size control and tumor suppression by restricting proliferation and promoting apoptosis. The core of this pathway is composed of a kinase cascade wherein STK3/MST2 and STK4/MST1, in complex with its regulatory protein SAV1, phosphorylates and activates LATS1/2 in complex with its regulatory protein MOB1, which in turn phosphorylates and inactivates YAP1 oncogene and WWTR1/TAZ. Phosphorylation of YAP1 by LATS1/2 inhibits its translocation into the nucleus to regulate cellular genes important for cell proliferation, cell death, and cell migration. Stimulates the kinase activity of STK38L.
<b>Cellular Location</b>	Cytoplasm. Nucleus
<b>Tissue Location</b>	Adrenal gland, bone marrow, brain, lung, placenta, prostate, salivary gland,

skeletal muscle, testis, thymus, thyroid gland, uterus, colon with mucosa, fetal brain and fetal liver
