Protein Information

Name NOS3 (HGNC:7876)

Function Produces nitric oxide (NO) which is implicated in vascular smooth muscle

relaxation through a cGMP-mediated signal transduction pathway (PubMed: 1378832). NO mediates vascular endothelial growth factor

(VEGF)-induced angiogenesis in coronary vessels and promotes blood clotting

through the activation of platelets.

Cellular Location Cell membrane. Membrane, caveola. Cytoplasm, cytoskeleton. Golgi

apparatus. Note=Specifically associates with actin cytoskeleton in the G2 phase of the cell cycle; which is favored by interaction with NOSIP and results

in a reduced enzymatic activity

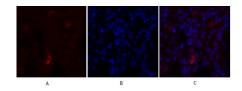

Tissue Location Platelets, placenta, liver and kidney.

Background

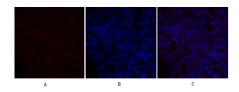

Produces nitric oxide (NO) which is implicated in vascular smooth muscle relaxation through a

cGMP-mediated signal transduction pathway. NO mediates vascular endothelial growth factor (VEGF)-induced angiogenesis in coronary vessels and promotes blood clotting through the activation of platelets.
