Protein Information

Name	SLC10A1
Synonyms	NTCP
Function	As a major transporter of conjugated bile salts from plasma into the hepatocyte, it plays a key role in the enterohepatic circulation of bile salts necessary for the solubilization and absorption of dietary fat and fat-soluble vitamins (PubMed: 14660639 , PubMed: 24867799 , PubMed: 34060352 , PubMed: 8132774). It is strictly dependent on the extracellular presence of sodium (PubMed: 14660639 , PubMed: 24867799 , PubMed: 34060352 , PubMed: 8132774). It exhibits broad substrate specificity and transports various bile acids, such as taurocholate, cholate, as well as non-bile acid organic compounds, such as estrone sulfate (PubMed: 14660639 , PubMed: 34060352). Works collaboratively with the ileal transporter (NTCP2), the organic solute transporter (OST), and the bile salt export pump (BSEP), to

ensure efficacious biological recycling of bile acids during enterohepatic circulation (PubMed:[33222321](#)).

Cellular Location

Cell membrane; Multi-pass membrane protein

Tissue Location

Expressed in liver (PubMed:11031103, PubMed:12409283). Expressed in placental trophoblasts (PubMed:12409283).

Background

The hepatic sodium/bile acid uptake system exhibits broad substrate specificity and transports various non-bile acid organic compounds as well. It is strictly dependent on the extracellular presence of sodium.
