Protein Information

Name ADAMTS2

Synonyms PCINP, PCPNI

Function Cleaves the propeptides of type I and II collagen prior to fibril assembly (By

similarity). Does not act on type III collagen (By similarity). Cleaves lysyl oxidase LOX at a site downstream of its propertide cleavage site to produce a short LOX form with reduced collagen-binding activity (PubMed:31152061).

Cellular Location Secreted, extracellular space, extracellular matrix

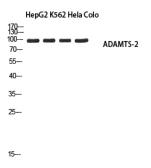

Tissue Location Expressed at high level in skin, bone, tendon and aorta and at low levels in

thymus and brain

Background

Cleaves the propertides of type I and II collagen prior to fibril assembly. Does not act on type III collagen. May also play a role in development that is independent of its role in collagen biosynthesis.
