## Protein Information

---

|                          |   |
|--------------------------|---|
| <b>Name</b>              | CCR5 ( <a href="#">HGNC:1606</a> )  |
| <b>Synonyms</b>          | CMKBR5  |
| <b>Function</b>          | Receptor for a number of inflammatory CC-chemokines including CCL3/MIP-1-alpha, CCL4/MIP-1-beta and RANTES and subsequently transduces a signal by increasing the intracellular calcium ion level. May play a role in the control of granulocytic lineage proliferation or differentiation. Participates in T-lymphocyte migration to the infection site by acting as a chemotactic receptor (PubMed: <a href="#">30713770</a> ). |
| <b>Cellular Location</b> | Cell membrane; Multi-pass membrane protein  |
| <b>Tissue Location</b>   | Highly expressed in spleen, thymus, in the myeloid cell line THP-1, in the promyeloblastic cell line KG-1a and on CD4+ and CD8+ T-cells. Medium levels in peripheral blood leukocytes and in small intestine. Low levels in ovary and lung.   |
