## Protein Information

<b>Name</b>	GYS1 ( <a href="#">HGNC:4706</a> )
<b>Synonyms</b>	GYS
<b>Function</b>	Glycogen synthase participates in the glycogen biosynthetic process along with glycogenin and glycogen branching enzyme. Extends the primer composed of a few glucose units formed by glycogenin by adding new glucose units to it. In this context, glycogen synthase transfers the glycosyl residue from UDP-Glc to the non-reducing end of alpha-1,4-glucan.
<b>Tissue Location</b>	Expressed in skeletal muscle and most other cell types where glycogen is present.
