## Protein Information

---

<b>Name</b>	SLC12A1 ( <a href="#">HGNC:10910</a> )
<b>Function</b>	Renal sodium, potassium and chloride non-electrogenic ion symporter that mediates the transepithelial NaCl reabsorption in the thick ascending limb and plays an essential role in the urinary concentration and volume regulation (PubMed: <a href="#">21321328</a> ). It can substitute NH4(+) for K(+), enabling NH4(+) apical transmembrane transport in the medullary thick ascending limb (MTAL). This function is crucial for maintaining ammonium homeostasis by the kidney, particularly during metabolic acidosis (By similarity).
<b>Cellular Location</b>	Apical cell membrane; Multi-pass membrane protein
<b>Tissue Location</b>	Kidney; localizes to the thick ascending limbs (at protein level).
