

Phospho-Progesterone Receptor (Ser190) Rabbit mAb

Catalog # AP75954

Product Information

Application WB, IHC-P, IHC-F, IP, ICC

Primary Accession P06401
Reactivity Human
Rabbit

Clonality Monoclonal Antibody

Calculated MW 98981

Additional Information

Gene ID 5241

Other Names PGR

Dilution WB~~1/500-1/1000 IHC-P~~N/A IHC-F~~N/A IP~~N/A ICC~~N/A

Format 50mM Tris-Glycine(pH 7.4), 0.15M NaCl, 40%Glycerol, 0.01% sodium azide and

0.05% BSA.

Storage Store at 4°C short term. Aliquot and store at -20°C long term. Avoid

freeze/thaw cycles.

Protein Information

Name PGR

Synonyms NR3C3

Function The steroid hormones and their receptors are involved in the regulation of

eukaryotic gene expression and affect cellular proliferation and

differentiation in target tissues. Depending on the isoform, progesterone

receptor functions as a transcriptional activator or repressor.

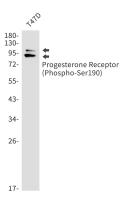

Cellular Location Nucleus. Cytoplasm. Note=Nucleoplasmic shuttling is both hormone- and cell

cycle-dependent. On hormone stimulation, retained in the cytoplasm in the G(1) and G(2)/M phases [Isoform 4]: Mitochondrion outer membrane

Tissue Location In reproductive tissues the expression of isoform A and isoform B varies as a

consequence of developmental and hormonal status. Isoform A and isoform B are expressed in comparable levels in uterine glandular epithelium during the proliferative phase of the menstrual cycle. Expression of isoform B but not of isoform A persists in the glands during mid-secretory phase. In the stroma, isoform A is the predominant form throughout the cycle. Heterogeneous isoform expression between the glands of the endometrium basalis and
