#### **Protein Information**

Name IGF2R

Synonyms MPRI

**Function** Mediates the transport of phosphorylated lysosomal enzymes from the Golgi

complex and the cell surface to lysosomes (PubMed: 18817523,

PubMed:2963003). Lysosomal enzymes bearing phosphomannosyl residues bind specifically to mannose-6-phosphate receptors in the Golgi apparatus and the resulting receptor-ligand complex is transported to an acidic prelysosomal compartment where the low pH mediates the dissociation of the complex (PubMed:18817523, PubMed:2963003). The receptor is then recycled back to the Golgi for another round of trafficking through its binding

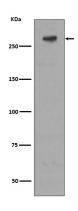

to the retromer (PubMed:<u>18817523</u>). This receptor also binds IGF2 (PubMed:<u>18046459</u>). Acts as a positive regulator of T-cell coactivation by

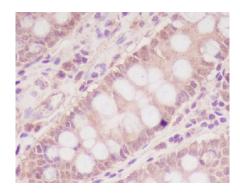

binding DPP4 (PubMed: 10900005).

## **Cellular Location**

Golgi apparatus membrane; Single-pass type I membrane protein. Endosome membrane; Single-pass type I membrane protein. Note=Mainly localized in the Golgi at steady state and not detectable in lysosome (PubMed:18817523) Colocalized with DPP4 in internalized cytoplasmic vesicles adjacent to the cell surface (PubMed:10900005).
