

## HIF1 beta Rabbit mAb

Catalog # AP77473

#### **Product Information**

ApplicationWB, IHC-PPrimary AccessionP27540ReactivityHumanHostRabbit

**Clonality** Monoclonal Antibody

**Isotype** IgG

**Conjugate** Unconjugated

Immunogen A synthesized peptide derived from human HIF-1 beta

**Purification** Affinity Chromatography

Calculated MW 86636

### **Additional Information**

Gene ID 405

Other Names ARNT

**Dilution** WB~~1/500-1/1000 IHC-P~~N/A

Format Liquid in 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02%

sodium azide and 50% glycerol.

**Storage** Store at 4°C short term. Aliquot and store at -20°C long term. Avoid

freeze/thaw cycles.

#### **Protein Information**

Name ARNT ( HGNC:700)

Synonyms BHLHE2

**Function** Required for activity of the AHR. Upon ligand binding, AHR translocates into

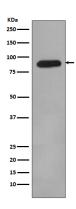

the nucleus, where it heterodimerizes with ARNT and induces transcription by binding to xenobiotic response elements (XRE). Not required for the ligand-binding subunit to translocate from the cytosol to the nucleus after ligand binding (PubMed:34521881). The complex initiates transcription of genes involved in the regulation of a variety of biological processes, including angiogenesis, hematopoiesis, drug and lipid metabolism, cell motility and immune modulation (Probable). The heterodimer binds to core DNA

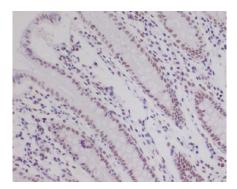

sequence 5'- TACGTG-3' within the hypoxia response element (HRE) of target gene promoters and functions as a transcriptional regulator of the adaptive response to hypoxia (By similarity). The heterodimer ARNT:AHR binds to core DNA sequence 5'-TGCGTG-3' within the dioxin response element (DRE) of

**Cellular Location** 

Nucleus.
