## Protein Information

<b>Name</b>	PLAA
<b>Synonyms</b>	PLAP
<b>Function</b>	Plays a role in protein ubiquitination, sorting and degradation through its association with VCP (PubMed: <a href="#">27753622</a> ). Involved in ubiquitin-mediated membrane proteins trafficking to late endosomes in an ESCRT-dependent manner, and hence plays a role in synaptic vesicle recycling (By similarity). May play a role in macroautophagy, regulating for instance the clearance of damaged lysosomes (PubMed: <a href="#">27753622</a> ). Plays a role in cerebellar Purkinje cell development (By similarity). Positively regulates cytosolic and calcium-independent phospholipase A2 activities in a tumor necrosis factor alpha (TNF-alpha)- or lipopolysaccharide (LPS)-dependent manner, and hence prostaglandin E2 biosynthesis (PubMed: <a href="#">18291623</a> , PubMed: <a href="#">28007986</a> ).
<b>Cellular Location</b>	Nucleus. Cytoplasm. Synapse {ECO:0000250 UniProtKB:P27612}.

Note=Recruited to damaged lysosomes decorated with K48-linked ubiquitin chains
