

NDUFAB1 Rabbit mAb

Catalog # AP78830

Product Information

Application WB, IHC-P, FC, IP

014561 **Primary Accession** Reactivity Human Host Rabbit

Monoclonal Antibody Clonality

Isotype IgG

Conjugate Unconjugated

Immunogen A synthesized peptide derived from human NDUFAB1

Purification Affinity Chromatography

Calculated MW 17417

Additional Information

Gene ID 4706

NDUFAB1 **Other Names**

Dilution WB~~1/500-1/1000 IHC-P~~N/A FC~~1:10~50 IP~~N/A

Liquid in 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02% **Format**

sodium azide and 50% glycerol.

Storage Store at 4°C short term. Aliquot and store at -20°C long term. Avoid

freeze/thaw cycles.

Protein Information

Name NDUFAB1 (HGNC:7694)

Function Carrier of the growing fatty acid chain in fatty acid biosynthesis (By

similarity) (PubMed: 27626371). Accessory and non-catalytic subunit of the mitochondrial membrane respiratory chain NADH dehydrogenase (Complex I), which functions in the transfer of electrons from NADH to the respiratory chain (PubMed: <u>27626371</u>). Accessory protein, of the core iron-sulfur cluster (ISC) assembly complex, that regulates, in association with LYRM4, the stability and the cysteine desulfurase activity of NFS1 and participates in the

[2Fe-2S] clusters assembly on the scaffolding protein ISCU

(PubMed:31664822). The core iron-sulfur cluster (ISC) assembly complex is involved in the de novo synthesis of a [2Fe-2S] cluster, the first step of the mitochondrial iron-sulfur protein biogenesis. This process is initiated by the cysteine desulfurase complex (NFS1:LYRM4:NDUFAB1) that produces persulfide which is delivered on the scaffold protein ISCU in a FXN-

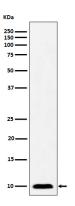

dependent manner. Then this complex is stabilized by FDX2 which provides

reducing equivalents to accomplish the [2Fe-2S] cluster assembly. Finally, the [2Fe-2S] cluster is transferred from ISCU to chaperone proteins, including HSCB, HSPA9 and GLRX5 (By similarity).
