

# NFAT1 Rabbit mAb

Catalog # AP79035

### **Product Information**

ApplicationWBPrimary AccessionQ13469ReactivityHumanHostRabbit

**Clonality** Monoclonal Antibody

**Isotype** IgG

**Conjugate** Unconjugated

**Immunogen** A synthesized peptide derived from human NFAT1

**Purification** Affinity Chromatography

Calculated MW 100146

## **Additional Information**

**Gene ID** 4773

Other Names NFATC2

**Dilution** WB~~1/500-1/1000

Format Liquid in 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02%

sodium azide and 50% glycerol.

**Storage** Store at 4°C short term. Aliquot and store at -20°C long term. Avoid

freeze/thaw cycles.

#### **Protein Information**

Name NFATC2

**Synonyms** NFAT1, NFATP

**Function** Plays a role in the inducible expression of cytokine genes in T-cells,

especially in the induction of the IL-2, IL-3, IL-4, TNF-alpha or GM-CSF (PubMed:15790681). Promotes invasive migration through the activation of GPC6 expression and WNT5A signaling pathway (PubMed:21871017). Is involved in the negative regulation of chondrogenesis (PubMed:35789258). Recruited by AKAP5 to ORAI1 pore- forming subunit of CRAC channels in Ca(2+) signaling microdomains where store-operated Ca(2+) influx is coupled to calmodulin and calcineurin signaling and activation of NFAT-dependent

transcriptional responses.

**Cellular Location** Cytoplasm. Nucleus. Note=Cytoplasmic for the phosphorylated form and

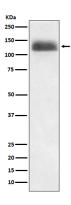

nuclear after activation that is controlled by calcineurin-mediated

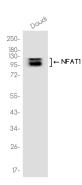

dephosphorylation. Rapid nuclear exit of NFATC is thought to be one mechanism by which cells distinguish between sustained and transient calcium signals. The subcellular localization of NFATC plays a key role in the regulation of gene transcription

#### **Tissue Location**

Expressed in thymus, spleen, heart, testis, brain, placenta, muscle and pancreas. Isoform 1 is highly expressed in the small intestine, heart, testis, prostate, thymus, placenta and thyroid Isoform 3 is highly expressed in stomach, uterus, placenta, trachea and thyroid.
