VCY1 Rabbit Polyclonal Antibody

VCY1 Rabbit Polyclonal Antibody Catalog # AP93321

Product Information

Application WB Primary Accession 014598

Reactivity Rat, Human, Mouse **Host** Polyclonal, Rabbit,IgG

Clonality Polyclonal Calculated MW 12917

Additional Information

Gene ID 353513;9084

Other Names Testis-specific basic protein Y 1, Basic charge, Y-linked 1, Variably charged

protein Y, VCY, BPY1, VCY1A

Dilution WB~~1:1000

Storage Conditions -20°C

Protein Information

Name VCY

Synonyms BPY1, VCY1A

Function May mediate a process in spermatogenesis or may play a role in sex ratio

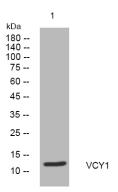

distortion.

Tissue Location Expressed exclusively in testis.

Background

The protein encoded by this gene is a member of a family of human VCX/Y genes. This gene family has multiple members on both X and Y chromosomes, and all are expressed exclusively in male germ cells. Members of the VCX/Y family share a high degree of sequence identity, with the exception that a 30-bp unit is tandemly repeated in X-linked members but occurs only once in Y-linked members. VCX/Y genes encode small and highly charged proteins of unknown function. This gene encodes a small, positively charged protein. The presence of a putative bipartite nuclear localization signal suggests that this gene encodes a nuclear protein. The genome has two identical copies of this gene within a palindromic region; this record represents the more centromeric copy. [provided by RefSeq, Jul 2008],
